## DETAILED ACTION

### ***Claim Rejections - 35 USC § 102***

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-8, 10-24 and 29-31 are rejected under 35 U.S.C. 102(b) as being anticipated by Lee (6,169,017). The reference to Lee teaches all of the process steps of the claimed invention. Specifically, as shown in FIG. 1C, Lee forms a first insulating layer (104) on a substrate, forms a polysilicon gate (106) over the first insulating layer, forms a second insulating layer (120) on the gate pattern and the substrate, removes some of the second insulating layer until the upper surface thereof is below the upper surface of the gate pattern (FIG. 1D), forms a second conductive layer (122) of the same material as the first conductive layer, on the second insulating layer and the gate pattern (FIG. 1E), selectively removes portions of the second conductive layer until the second insulating layer is exposed and spacers (122a) are formed at both sides of the upper portion of the gate, and a surface area of the gate pattern is enlarged (FIG. 1F), and subsequently removing the second insulating layer (FIG. 1G).

Lee also teaches all of the other features of the claimed process including the particular deposition and etching processes used, along with the relative dimensions claimed. Lee also forms a third conductive silicide layer (132) on the upper surface of the gate, as claimed.

***Allowable Subject Matter***

Claims 9 and 25-28 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
